EV Charging for Fleets

Any business which owns and operates its own fleet, knows that having vehicles which are ready and reliable is key for operational success. Fleet businesses need to plan their transportation ahead of time, keeping in mind their fleet's longevity and environmental impacts. Businesses which operate with electric vehicles have fleets with the ability to run with lower environmental impact and longer-lasting vehicles. Whether your fleet is already electrified or you are planning to grow your fleet by adding electric vehicles, deciding on how your fleet will be charged is a necessary component. Whether your fleet charges at a depot center, along their route, or at home Blink has your fleet charging solutions.

Power Your Fleet with **CLEAN ENERGY**

- Bring sustainable practices and green initiatives to your business
- Build on existing EV charging infrastructure
- Create a future-proof solution to operate large fleets with low environmental impact
- Maximize savings on cost with power management controls
- Reduce CO² emissions along the heavily traveled transport routes
- Save an average of 35% on lifetime vehicle maintenance cost
- Easily manage and report fleet usage with Blink network services
- Create a reliable and ready fleet system
- Improve air quality in your local community

The Blink Fleet EV Charging Solution

Across the United States businesses which operate their own fleets are turning to Blink to install EV charging stations, helping to provide a cleaner and greener community.

Blink IQ 200 charging stations are ideal for the corporate environment offering maximum flexibility and control.

- Works on all electric vehicles, Tesla adapter may be required
- When making the chargers available to the public, billing can be time-based, kWh-based, session-based, or even can be set as a company-provided employee benefit
- Centrally manage your EV charging stations via the Blink Network
- Networked solution allows for full control, monitoring and reporting of EV station usage
- Dynamic load management allows you to maximize usage
- EV charging stations can contribute to LEED certification
- 24/7 customer service for EV drivers and station hosts
- Fully customizable pedestal wraps for branded messaging

Blink offers unique options such as the ability to optimize our services specifically for fleets.

- Restricted usage with Blink cards for fleet vehicles
- 80A Level 2 charger is ideal for depot and mid to heavy fleets
- Fast turnarounds for usage reports by station or by users
- Create additional revenue from each station by making it also publicly available.

When you're ready,
a Blink representative
can help you accurately
assess your fleet needs.
