Fleet managers & operators know that the key to operational success is a reliable and integrated fleet solution. Fleets need to prepare their vehicles ahead of time, considering their fleet's efficiency and scalability. Electrifying your fleets with Blink can help with lower operating costs, reduce maintenance, lower electricity costs. Blink has all your fleet charging solutions with innovative equipment designed for fleet applications and is easy to use with robust reporting creating scalable operational efficiencies.

## An Integrated **ELECTRIC FLEET SOLUTION**

- Low mileage delivery
- Minimize fueling costs with scheduled off-peak charging
- Implementation & Program Management Team
- Pair with Blink Fleet, which dynamically tracks and communicates with fleet vehicles and drivers
- Grant & Rebate Funding Support
- Quickest charging capability & 24/7 customer service
- Increase efficiencies & 99% uptime
- American Made & Diverse Supply Chain
- Cost-saving opportunities such as load sharing capabilities

## The Blink Fleet EV Charging Solution

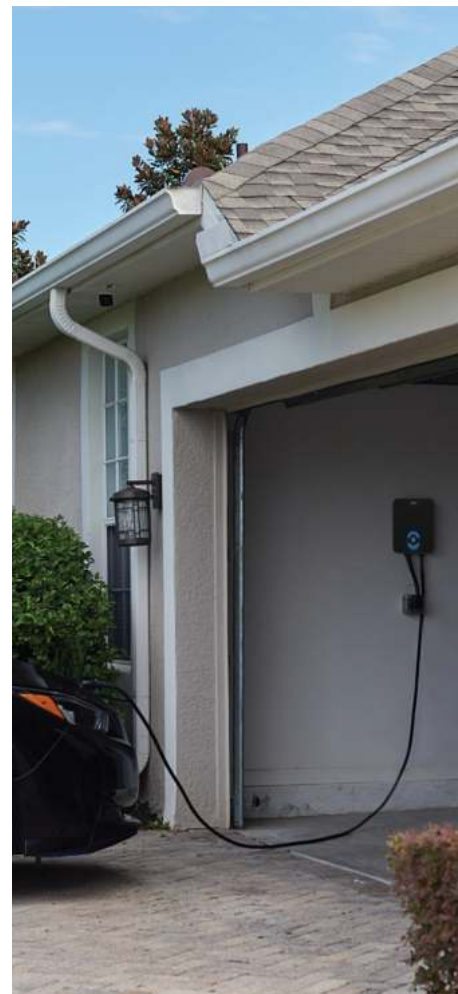

### From depot charging to DCFC solutions to home charging

For depot charging, Blink offers the and the Series 7, which are powerful enough to charge your fleet with fast Level 2 AC chargers featuring up to 80 amps of power to get your vehicles on the road quickly.

For home charging, the Blink HQ 200 is designed to make charging from the comfort of your home even easier, faster, and better than ever before. Blink's DC fast charging solutions range from 30kW to 360kW, suitable for any fleet, from light duty to heavy duty.

Our Blink Fleet management portal connects with all our chargers, track individual vehicle energy consumption to manage utility, and set rules for the fleet to ensure that vehicles are always ready to be deployed.
